## EXECUTIVE SUMMARY

To establish SmartAgro as the most loved & trusted agro-realty company which creates highly profitable farming businesses, that deliver a life of happiness to our employees, vendors and most importantly, our customers

### Market Gap- Timber Market

- Land fragmentation has led to smaller farm sizes, impacting economies of scale & ultimate timber yield
- Industry estimates show that the demand for timber would double by 2020 but given environmental degradation of forest lands, the supply would need to come from non-forest sources.
- In 2025, India will be the third largest construction market in the world- which consumes a large portion of timber production.

### Market Gap- Landowners/Investors

- Landowners/investors who invest in land are most likely neither able to farm on them due to lack of labour & management nor are they able to earn rent through them due to current oversupply of real estate inventory; in effect, only earning them returns upon resale.
- Investors are always on the lookout for secondary investment options with tax-free income and high returns

### Business Opportunity

To sell at a profit, parcels of pre-developed timber plantations to investors, as a unique long term agro-realty investment project. The developed lands will then provide non-taxable income to investors upon harvest.

### Target market

Core potential customers would be businessmen & professionals (SEC A & B) who are looking at land as a secondary form of investment for long term gains. Secondary target consumers would be middle income buyers who are looking at investing towards retirement by creating back up sources of income.

### Business model

Generating profits through agricultural lands by selling these to potential buyers at a premium by offering to develop & use it to grow commercial crops like timber & horticulture crops, in effect generating short & long term cash flows for them.

**Competition | Key Competitor: Hosachiguru**

## OVERVIEW

# TIMBER BY SMARTAGRO (HINDUPUR)

- It's no surprise that Indian investors prefer investing in land as a form of investment. Land as an investment had the highest value appreciation between the years 2008 and 2015. However, most land owners don't have the means to monetize their asset till the time of resale. Of course, they can rent the flats they own, but what if they own a bare plot of land? The options are limited. But what if they were told that the returns from their plot over a 10-year period could surpass that of an urban real estate project investment? Here is where Agro Realty comes into play.
- Agro Realty is an innovative solution where the land that you invest in, is used for professionally managed agriculture of profitable crops and plantations. This ensures cash flows during the period of ownership apart from returns earned upon resale due to asset appreciation.
- In the case of TIMBER by SmartAgro, we will leverage our rich experience in the timber industry to convert barren land into a prosperous high yielding timber farm, for our investors. India is already facing domestic scarcity of timber and the demand in the country is only going to double in the coming decade- there can be no better crop to capitalise the barren land plots in the fertile lands of Hindupur.
- TIMBER will focus on the Melia Dubia also known as the Malabar Neem, which is an ideal tree species for agro forestry. It characteristically grows quickly, reaching full height in about 8-10 years. It is not susceptible to insects & pests and needs low maintenance. The market demand for its wood is high, making it the perfect choice for our agricultural plan. Of course, we would grow cash crops in the years leading up to the timber harvest and these promise a healthy cash flow too.
- Lastly, Hindupur located in the Anantapur district of Andhra Pradesh, on the border shared with Karnataka, is a fertile region, well connected by all modes of transport and just an hour's drive away from Bengaluru. Being a growing industrial region, with presence of many established corporations and plans of more to be set up, it enjoys many subsidies and tax benefits. It is the perfect place to invest in an agro realty project.

## PROJECT FLOW

# TIMBER BY SMARTAGRO (HINDUPUR)

## STAGE 1 SETTING UP

SmartAgro will purchase ~58 acres of fertile land in Somandapalli-Hindupur. The land would have clear access from main roads. It would further be developed in terms of water supply, electricity, fencing, land levelling and other basic amenities such as common borewell and water storage facilities. Melia Dubia seedlings would be planted and well-trained farming staff will be positioned on location to care for the plantation.

## STAGE 2 BUYER OUTREACH

Outreach to create awareness and communicate advantages of TIMBER by SmartAgro would be carried out in this stage. A buyer would be able to purchase 1 acre at an approximate price of INR 19.5 lakhs.

## ADVANTAGE FOR BUYERS

1. High Returns Through Long Term Investment On Sale of Timber.
2. Yearly Fixed Earnings on Cash Crops
3. Tax Free Income (Agricultural Income)
4. Agriculture Maintenance Until Maturity Including Cost of Fertilisers, Machinery and Staff salaries to be done by SmartAgro
5. Environmentally Friendly Farming Methods With The Latest Technology To Ensure High Yields
6. Insurance For All Crops To Protect Against Contingencies

## GROWTH & HARVEST

Every year, land-owners can earn yearly revenue till final timber harvest, through cash crops. As for the timber, the melia timber would be ready for harvest in about 10 years post which using SmartAgro's timber industry network and buy back agreements with various buyers, we would sell the timber for you at the maximum possible price to reap the best returns. One can grow about 150 trees in an acre. A single tree yields about 25-30 Cu.ft of wood. Going by the current timber rate of INR 550 per Cu.ft, the revenues earned would be about INR 41 Lakhs! Over and above this, landowners benefit from the appreciated cost of land on maturity due to the presence of a growing industrial hub around the project in Hindupur - Somandapalli - Penukonda Road.

## UNDERSTANDING **MELIA DUBIA**

The fastest growing timber variety, the Melia Dubia or the Malabar Neem belongs biologically to the Meliaceae family. It is indigenous to South East Asia, India and Australia. Known for its quick growth and early maturity, it is a blessing in disguise for the timber trade.

The demand for Melia wood comes from numerous industries such as plywood manufacturing, furniture manufacturing, matchbox industry, energy production industry and the firewood trade.

It can take a minimum of 10 years for the Melia to fully grow and it will be a substitute of teak value. It grows to a height upto 40 metres. On an acre of land, depending on topography, one can plant about 150 trees. A mature tree can yield about 25-30 Cu.Ft of wood.

Agriculturally, the tree can grow very well on all soil types but is perfect for fertile loamy soil. They require minimum irrigation of about once in every 15- 20 days and are resistant to insect and pest attacks. They thrive well with natural pesticides such as neem, garlic & salt sprays and citrus oils. Environmentally, they help prevent rise in temperature and keep a check on CO<sub>2</sub> emissions

## ABOUT HINDUPUR

Hindupur located in the Anantapur district of Andhra Pradesh, is an up and coming industrial hub with easy access through rail, road and air. Lying on the Bangalore Hyderabad Highway, it is only 108 kms away from Bangalore International Airport. In recent years, the area has experienced huge industrial expansion and has the presence of large corporations such as Berger Paints, Wipro, Super Spinning Mills, Larsen & Toubro to name a few. Diverse in its appeal, it is home to multiple PSUs, industries, SEZ and an upcoming Solar Plant Hub spearheaded by the government

## BE A PART OF AGRO REALTY EARN RETURNS IN A FEW MONTHS

## WHY HINDUPUR?

- Yearlong Water Supply Through Canals
- Low Land Prices
- Skilled Manpower Availability
- Free Electricity
- Availability of Multiple Subsidies
- Perfect weather

SmartAgro is currently giving the opportunity for investors to be a part of this agro realty business through funding. As an investor, you would be able to recover your investment as soon as the plots are sold and earn a healthy profit.
